

Open position: Research engineer

SARomics Biostructures is one of the small fast-growing biotech companies in Lund. SARomics has attracted significant funding for its research programs and is currently involved in several international research initiatives aiming to discover leads for new medicines. In parallel the company has built a global reputation for its structural biology platform and its structure-based drug design skills and is currently supporting clients in Asia, Europe and North America to pursue their drug discovery objectives. We are now strengthening our team with a research engineer to assist our protein crystallographers with protein crystallization and characterization.

The successful candidate will:

- Operate and maintain specific equipment for liquid handling and crystallization
- Characterize protein samples before crystallization trials using biophysical methods
- Set up and monitor protein crystallization experiments
- Express proteins in *E. coli*
- Analyze, document and present/report experimental data
- Perform certain administrative functions like ordering of consumables and chemicals

Qualifications

The successful candidate is a skilled, organized, service-minded life-science professional with a positive attitude, who enjoys laboratory-based projects in a fast-paced, team environment. The candidate should be eager to learn and take instructions but also work more independently.

Minimal requirements:

- University degree in biochemistry, biomedicine, biotechnology or other relevant subject
- Experience of laboratory work with proteins
- Ability to carry out all laboratory operations in a safe and effective manner and to maintain a clean and orderly laboratory environment
- A strong interest in learning and developing techniques in liquid handling, protein crystallization and protein characterization using robotics and automation
- Fluent in Swedish and English, both written and oral
- Driving license
